BITO
STORAGE
SYSTEMS

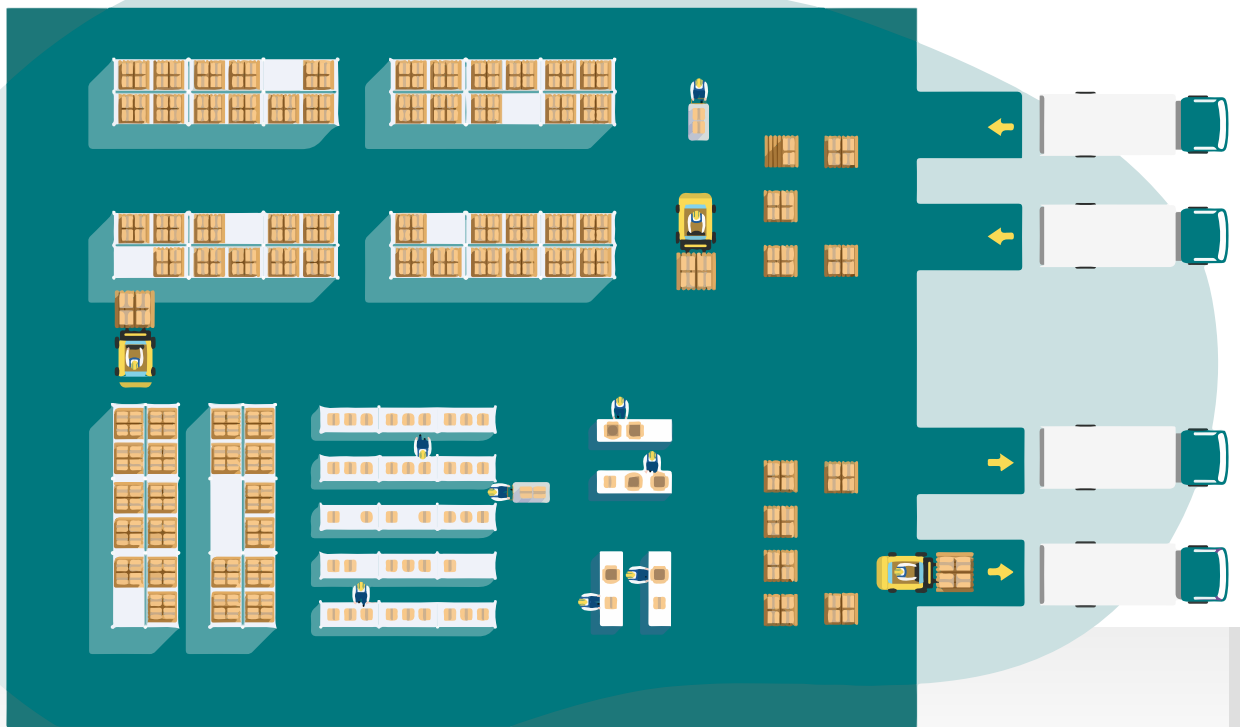

**The BITO WMS
manages all your
warehouse operations
with a single tool**

Benefit from standardised processes

based on best practice principles

The **BITO WMS** handles both inventory management and process control (order monitoring) in your warehouse based on best practice warehouse operation standards. The **BITO WMS** can be used both as a stand-alone system, but can also be integrated via interfaces into higher-level host systems, e.g. an ERP or merchandise management system or an online shopping system.

The key features include:

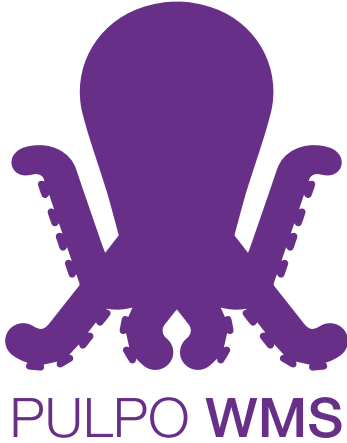

- ✓ Mapping warehouse structures (zones, shelving & racking configuration, storage positions, etc.)
- ✓ Master data management (accounts receivable, item numbers, storage positions, etc.)
- ✓ Inventory management
- ✓ Order monitoring (purchase orders, sales orders, production orders)
- ✓ Transport management (forklift operations, storage and retrieval operations, relocation of goods within your warehouse)
- ✓ Key performance indicator system (KPI) to monitor order processing, capacity utilisation, productivity, etc.
- ✓ Process management:
 - Goods-in (order notification, goods acceptance, quality inspection, transfer to storage location)
 - Goods-out (order scheduling, picking, packing, shipping)
- ✓ Repeat orders / restocking

Our solutions in detail

PULPO Warehouse Management System

The lean WMS solution for e-commerce businesses

- Web and app-based solution (**SaaS**)
 - Plug & Play - can be integrated within 6 weeks
 - Ready for use in 3 steps:
 1. Design your warehouse using the Warehouse Wizard
 2. Connect your shop or ERP system (plentymarkets, Shopify, Odoo, Bilbee, Xentral, Woo-Commerce, Magento) via REST-API
 3. Create master data (customers, articles etc.)
- ... and get started!

Simple and intuitive management of all processes:

Goods receipt, warehousing, order picking, packaging, shipping, inventory tracking, returns processing.

COGLAS WEB WMS

The allrounder for distribution and production logistics

- Web-based solution
(available as SaaS or as on-premise solution)
- Rapid implementation within only 8 weeks
- Can be integrated into existing ERP systems
(e.g. SAP, Navision, SAGE etc.)

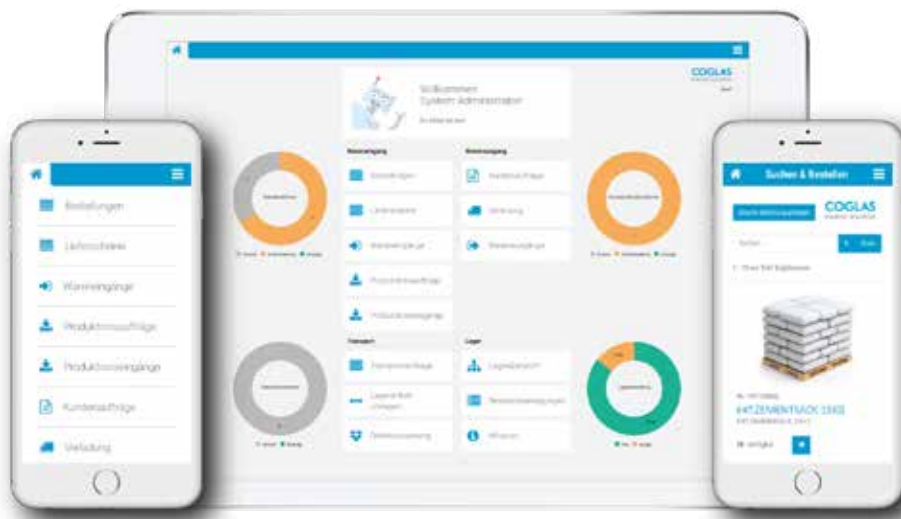

Configurable processes for all common logistics standards:

Goods-in, storage, order picking, shipping, inventory monitoring as well as further features.

Additional features

to improve warehouse management and boost efficiency

- Returns processing
- Cross-docking functionalities
- Shopfloor
- Supplying production lines
- Loading and freight planning
- Hazardous materials management
- Load carrier management
- 3PL functionalities
- KPI reports and export functions
- and many more...

Modern.
Versatile.
Web-based.

Synergy between warehouse hardware and software: Optimised warehouse processes implemented at a fast-growing furniture manufacturer

Pulpo WMS in use at Metallbude GmbH

Metallbude manufacture minimalist, high-end customised pieces of metal furniture, which arrive at the customer's doorstep completely welded and ready for use. The furniture is sold through the company's own online store. The young company has grown rapidly and was looking for an efficient solution to restructure their warehouse area. BITO pallet racking, BITO shelving and the warehouse management system **PULPO WMS**, recently added to complement the BITO portfolio of intralogistics solutions, helped to create more storage space and to optimise both manual and digital warehouse operations.

Benefits of the BITO WMS:

- ✓ 100% cloud management solution (SaaS)
- ✓ Operation with mobile end devices
- ✓ Based on best practice WMS standards
- ✓ Variability in processes / master data
- ✓ Full release capability
- ✓ System integration via standard interfaces
- ✓ Intuitive operability - short training period
- ✓ Short implementation time
- ✓ Low investment
- ✓ Contract can be terminated on a monthly basis

Efficient processes: With BITO pallet racking and shelving, Metallbude have been able to expand many times over their storage capacity on the existing storage area of 2,500 sqm. The new storage systems help to maintain tidiness, provide extra space and are precisely tailored to the in-house processes of the company.

Metallbude use the **PULPO WMS** warehouse software to map all processes in a digital and easy-to-read format. All operative warehouse processes are managed through mobile end devices.

Warehouse transparency from the moment the goods are received until they are delivered to the customer: Furniture from Metallbude is handmade and unique, arriving at the customer's door welded and ready for use. The company uses **PULPO WMS** as a convenient and comprehensive solution for registering goods-in items, assigning storage locations, booking products out when they are picked for manufacturing and for handling all processes related to the dispatch of goods.
