STORAGE SYSTEMS
NORDIC

Are you familiar with this?

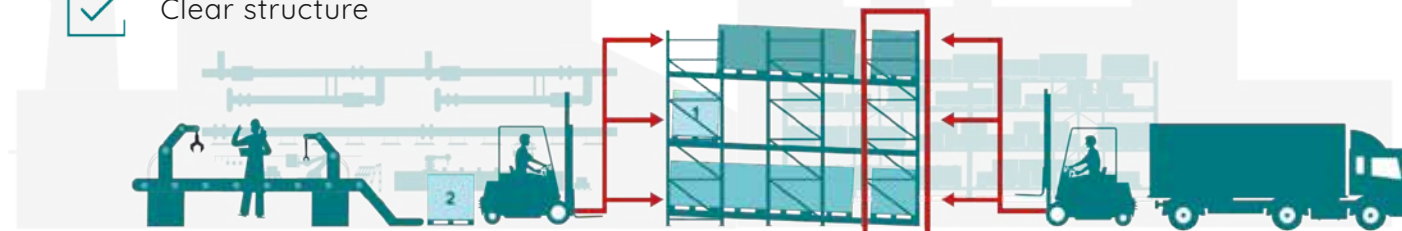

- ☒ Time wasted searching for pallets
- ☒ Mutual blocking of the forklifts
- ☒ Incorrect batch sequences

The workflow between production and dispatch is simply not running smoothly. Finished products are stored crosswise, batch sequences are not adhered to and there are mutual obstructions during storage and retrieval processes. All avoidable scenarios that are not only annoying, but also cost time and money.

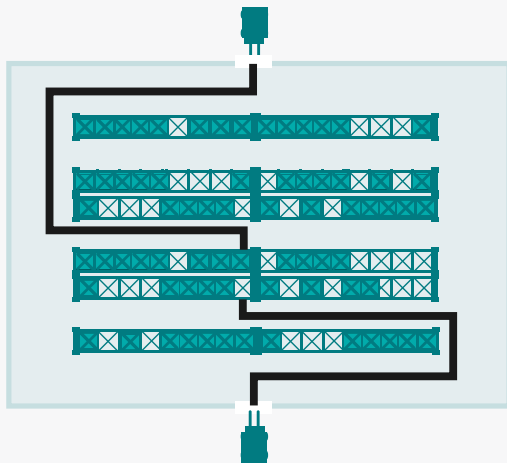

Fortunately, we have the solution!

- ☒ Process acceleration due to shorter transport routes
- ☒ Space-saving due to compact storage
- ☒ Safety due to separate areas
- ☒ FIFO - First In First Out
- ☒ Clear structure

With our compact pallet live storage system - PLS for short - the workflow is organized efficiently, the available space is used optimally and even the FIFO principle is taken to heart. From now on, storage and retrieval processes no longer get in each other's way and the pallets are always clearly arranged in one area at the retrieval point. Work can flow again, saving time, money and nerves.

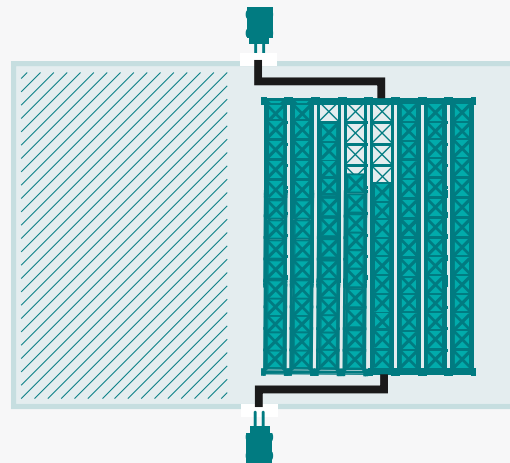

Compare for yourself

Palett Rack

Requires an area of approx. **1.000 m²**

Approx. **55 m** of transport routes are required for storage and retrieval processes

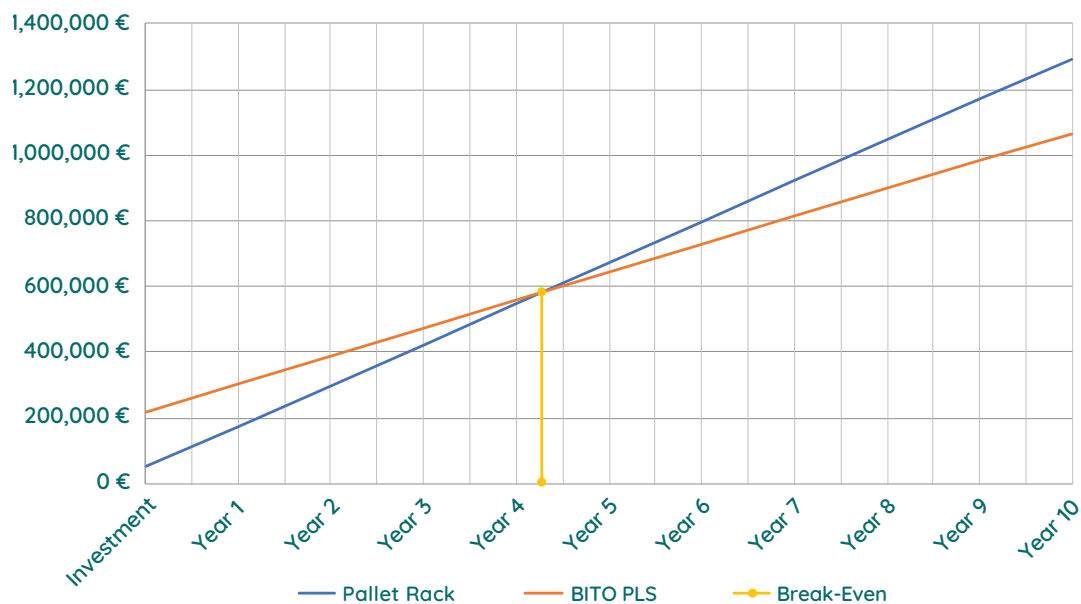

BITO PLS

Requires an area of approx. **500 m²**

Approx. **25 m** of transport routes are required for storage and retrieval processes

Conclusion

In this example with the BITO pallet live storage system, an area optimisation of approx. 50% and a reduction in routes of approx. 45% can be achieved. The ROI analysis shows that the initially higher investment in the BITO pallet live storage system has already been amortised after 4.3 years.
